

Safety, health and environment for construction site managers

Every manager needs an understanding of their safety and health responsibilities

Fact sheet

The construction industry is projected to generate £15.5 trillion globally by 2030, yet 60,000 workers die on construction sites every year. Good management standards can, however, prevent up to 70 per cent of accidents.

IOSH's world-class course provides a step-by-step guide to understanding and managing the risks. Keeping your construction business healthy and safe with an effective training programme will enable you to reduce the cost of accidents and illness by up to 40 per cent.

What are the important things to know about Safety, health and environment for construction site managers?

The course aims to help delegates understand how they can benefit from working in a healthier and safer way. It gives workers useful knowledge that they can apply in their day-to-day work.

The course can be customised to suit construction workers either as a cohort from a single company or as a group from several organisations.

A single scenario and case study develops through each stage of the course, giving delegates the opportunity to practice their acquired skills.

The health and safety practices of construction teams must comply with the relevant legislation and policy. That is why we have ensured that the section on legislation can be tailored to local contexts. It sets out a global standard, based on underlying principles of good practice. Delegates can be confident that, wherever they are based, the learning they receive is of the same high standard.

Unlike other construction courses, completion of IOSH's Safety, health and environment for construction workers means that there is no need to sit any additional environmental courses. This is therefore an excellent option that saves time and expense while delivering high-value and high-quality training in key areas.

Safety, health and environment for construction site managers covers:

- local law and enforcement
- preparing for work
- general management of the site, workers and contractors, including method statements and permits to work
- managing environmental aspects and impacts relating to construction projects
- principles of the Construction (Design and Management) Regulations 2015
- the key issues and control of working at height, including:
 - plans and risk assessments
 - roofs and fragile surfaces
 - working platforms and ladders
 - management, use and stability of scaffolds

- fall arrest and suspension equipment
- site requirements for the welfare of construction workers.

Delegates will receive an IOSH certificate after successful completing an end-of-course exam.

The product includes:

What can employers be assured of?

- certificated training for their managers and supervisors that is globally recognised and respected
- peace of mind offered by training that's designed and quality-assured by the Chartered body for safety and health professionals
- flexibility of course delivery in time-slots that suit the business

What business outcomes can employers expect?

- greater productivity as a result of fewer hours lost due to sickness and accidents
- improved, company-wide safety awareness culture and appreciation for safety measures
- proactive staff involvement improving the workplace
- enhanced reputation throughout the supply chain.

Eligibility to deliver the course

To be eligible to deliver the course, trainers must have, as a minimum:

- three years' construction experience or a level 3 sector-specific qualification
- membership of IOSH at Technical grade
- up-to-date CPD
- an adult training qualification at level 3 on a regulated qualifications framework or a certificate for successful completion of the IOSH Train the Trainer course
- two years' substantial face-to-face training experience.

Safety, health and environment for construction site managers is delivered by IOSH's network of approved training providers and includes

- access to an online platform which enables trainers to deliver the face-to-face course to delegates
- a digital set of trainer notes
- a digital bank of assessment and marking papers.
